GX40 Synergist

Nano-Technology Application System

The AgXcel Synergist® system is designed for Nano volume application of NutriSphere-N (<http://www.vlsci.com/>) NH₃ at a rate of 32 oz/acre. Lower and Higher rates are possible. With the demand for increased accuracy and lower rates the Synergist allows for very low rates of chemical application with precise accuracy. Ounces per acre denote a very small amount of liquid is being distributed. At 6 mph on 30" spacing, 32 oz/acre means that each row is doing just under 1 oz/min. On a 12 row implement the total amount being distributed is less than 12 oz/min. AgXcel's Synergist system has been engineered to distribute this flow evenly and accurately.

Features & Benefits Include:

- Low flow electromagnetic flow meter
- Dual micro tube distribution
- Flow indicators
- Electric micro control valve
- Recirculation Kit
- Tank Agitation
- Pressure sensor
- Pump priming and Bleeder valve
- System control flexibility
- Available in 55 or 110 gallon tank with a 3 gallon rinse tank

OEM INTEGRATION

Trimble Controller

Integra Controller

GS2/GS3 Controller

****Liquid module must be purchased from your John Deere, Trimble or Ag Leader Dealer.**

AutoX- Compact Plus
