

AgXcel

PRECISION LIQUID FERTILIZER APPLICATION SOLUTIONS

GX5 Centrifugal Pump System

Simple - Affordable - Durable

GX5 Centrifugal Pump System:

AgXcel's newest hydraulic pump offering!

The ACE 125 & 155 Series Wet Seal Centrifugal Pump System comes with the Motor and PWM valve included and built onto the complete pump setup.

AgXcel's Wet Seal Centrifugal Pump is also paired with either a **Raven Turbine Flowmeter** or a **Magnetic Flowmeter**, whichever option you prefer for your operation.

Optional **Section Valve Kits** are also available through AgXcel along with Liquid Rate Controllers & harnessing.

AgXcel pre-assembles all pump system setups to ensure you receive a complete and compact package, ready to bolt onto your implement.

Also Provided is an easy to read setup manual for plumbing & rate controller settings, with optimized settings to ensure the smoothest application rate possible with quick response times.

Providing the best equipment on the market, **AgXcel has chosen to offer a wet seal design.** This allows the user to run the pump dry without burning up seals, compared to a conventional centrifugal pump which leads to annoying and inconvenient repairs. Having a **wet seal pump means that all seals are lubricated in a separate chamber, not relying on your fertilizer flow to lubricate and keep the seals cool.** So next time your tank runs dry or you are just trying to prime your pump, don't stress about burning your pump seals!

GX5

GX5 Centrifugal System

GX5 CENTRIFUGAL PUMP FEATURES:

- Can apply down to 0.8 GPM, perfect for infurrow applications
- PWM Valve & Motor Included
- Wet Seal Design Allows The Pump To Be Ran Dry With No Damage
- Flowmeter Included
- Optional Section Valves Can Be Added
- Low Hydraulic Flow Usage
- Rated Up To 120 PSI
- Agitation Ready
- Pre-Assembled By AgXcel
- Included Low Profile Mounting Bracket
- Designed for Closed Center Hydraulic Tractors
- 1500 Hour Average Service Span
- Easily Integrated Into Any Liquid Controller

GX5 Centrifugal Pump System

Simple - Affordable - Durable

GX5

GX5 Centrifugal System

AgXcel Turbine or Magnetic Flowmeters

The Flowmeter is one of the most important components to any pump system. Responsible for ***sending flow rate information to the liquid controller***, it is critical for the flowmeter to properly read flow. This is why we trust the ***Raven line up of Turbine Flowmeters and the ARAG line of Magnetic Flowmeters***.

- Options to meet any budget
- Reliable
- Rugged
- Over a decade of in field use

Liquid Controllers

Looking for a compact controller for single rate management? Consider the ***AutoX Compact Plus Controller Kit***. This controller is independent of any components or electronics in your tractor, leading to an easy to use and simple setup for any application. This kit from AgXcel ***includes all harnessing and hardware needed for mounting***. Or consider the Raven RCM ISOBUS Liquid Controller Kit. A liquid controller kit that can be used through the ***Virtual Terminal of your existing display***. Also comes included with all harnessing and mounting hardware needed.

Auto X Compact Features:

- Can Control Up To Three Section Valves
- Automatic Rate Adjustment
- Garmin Speed Sensor & Height Switch
- Included
- Pre-Configured By AgXcel

Raven RCM Features:

- ISOBUS Compatible Allows The Usage On Any Existing Display
- Multi-Product Control Capable
- Automatic Rate Adjustment
- Swath Control Capable
- Task Controller Compatible

Can also be used with other Controllers:

- John Deere
- Case IH
- AgLeader
- Trimble
- Raven
- Mueller
- & More
