

GX2 Precision Liquid Fertilizer System

The **GX2 Dual Electric Pump System** from AgXcel, trusted since 2012, is the **highest quality and most reliable** 12V pump system available today. Our latest revision of the GX2 Series uses the **highest quality parts**, providing you with a pump system **you can trust** to function in the middle of planting season.

HIGH QUALITY COMPONENTS:

- 12V pumps with EPDM & Viton Diaphragms
- Magnetic Flowmeters
- Stainless Steel Pressure Transducers
- TeeJet Section Valves

All of these components have been chosen after years of testing.

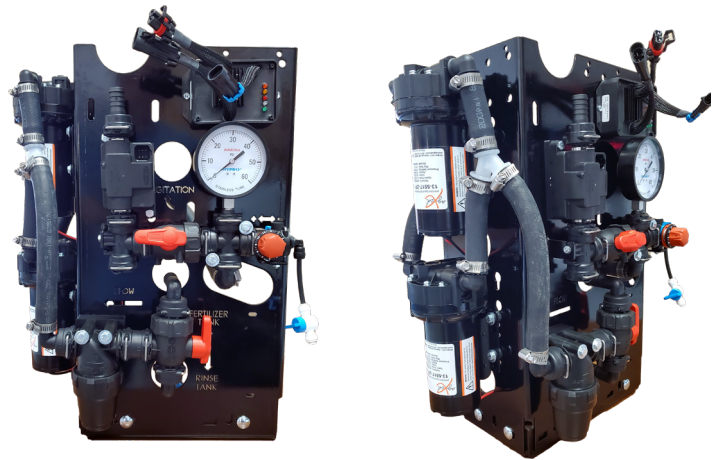

The GX2 was **purpose built**, intending to provide the farmer with a **simple pump system** anyone on the farm can use and understand. **Affordable** for everyone demanding quality products.

Durable, a must have to get the seed planted, when it needs to be planted.

GX2

GX2 Electric System

The GX2 Dual Electric Pump System:

- Compatible with all Liquid Controllers from John Deere, Case, Raven, AgLeader, Precision Planting, Trimble, & more
- AgXcel's designed PWM driver included
- Magnetic Flowmeters available for all flow ranges
- Swath Control Capable
- Two 5.3 GPM Pumps plumbed together for maximum output
- Perfect for InFurrow applications
- Cost Effective and Reliable
- Trusted since 2012 for reliable use & upgrades
- Shipped pre-assembled to fit your needs
- Quick and easy installation
- Can be used with larger mesh filters and microtubing

GX2 Precision Liquid Fertilizer System

✓ Magnetic Flowmeters

The Flowmeter is one of the ***most important components*** to any pump system. Responsible for sending flow rate information to the liquid controller, it is critical for the flowmeter to properly read flow. Our line of Magnetic Flowmeters are very low maintenance. Just winterize at the end of the year and that's all! ***No moving parts means less points of failure, no need to change the calibration number for different fertilizers used, & LED light for easy diagnostics.***

- No mechanical moving parts
- Advanced technology at an affordable price
- Low sensitivity to turbulence
- High precision, max. error is 0.5%
- Wide variety of flow rates for use in diverse applications
- Performance independent from fluid density & viscosity
- Save chemical throughout the life of the system

✓ Rate Controllers

Seamless compatibility with all OEM controllers:

- John Deere
- Case IH
- Raven
- AgLeader
- Trimble
- and MORE

✓ PWM

AgXcel's designed PWM pump driver has been tuned for use with the GX2 Dual Electric Pump System. Easy to see LED's for simple diagnostics keeps down times to a minimum. With in-field use since 2012, AgXcel has perfected the design of our PWM driver, for use in all applications, in all conditions. ***Simple, affordable, & durable.***
